- Comparison of billed codes to documentation
- Written analysis of documentation and revenue opportunities
- One-on-one consultation with provider to answer specific questions and make recommendations for documentation improvement

Medical practices today are facing more operational challenges than ever. With decreasing reimbursements from payors and changes in coding guidelines, practices are realizing the effects to their bottom line.

A coding and billing audit performed by our certified professionals, will allow a practice to identify areas of the practice where there may be opportunity for increasing profitability through proper documentation and coding, as well as minimizing costly delays in timely reimbursement.

As part of the audit process, you will receive a report that will identify the opportunities for improvement, along with a customized training program that we implement for you. Too often revenue is uncaptured or captured incorrectly – putting physicians and practices at unnecessary financial risk.
